

memento project

on the Otherness of North and South

Artists: Guido D'Angelo, Eva Kaiser, Antonio Pauciulo, Christian Pertosa

memento project is a progressive art project, engaged with issues related to personal memory and archetypes.

Two expositions uncover polarities resulting from the cultural and artistic diversity. The first show depicts this variety as harmony, meanwhile the second one as conflict.

The exhibitions are based upon the individual visual vocabulary of each artist to create an organic spatial composition. It contains a series of paintings and objects representing today's world diversity, made up of disparate and often contrasting realities. The objective is to open ways of confrontation between the artists and to extend the possibilities of the medium of painting.

This experiment is based upon the artists' cooperation, the aim of which is to communicate images that act on different cognitive levels from representation to symbolization, materiality and spatiality. It is an array of visual possibilities permeating an entire spectrum ranging from the mental to the mineral. By mineral we mean the zero point of being.
